Complete Access Control for the Medical Community-

Whether you are a manufacturer, Testing facility, distributor, or retailer. Controlled access is more important than ever. Providing power and versatility to secure any door makes a huge difference. Regular employees should not be able to access those areas with high security products like schedule 1 & 2 drugs. The ability to manage and access doors either remotely or locally is some of the optional technologies to fit any application.

Improve facility security and accountability.

The ability to control access and reduce risk can improve the organization and effectiveness of your facility. Not just with product but with other secure areas as well such as Cash rooms, Managers offices, Rest rooms, building entry, Shipping & receiving points, and exit points. No need for repair and Maintenance Crews.

Managed from a single dashboard - It's that easy.
